

# SUPERIOR BEST FINEST PREMIER WORLD-CLASS

Great customer service does matter.

## Freelin-Wade — A Coilhose Company

Freelin-Wade began in our founder's garage in 1980. As you can imagine, there have been a lot of changes in the 28 years that have followed. We've expanded into new industries, reached out to global markets and were acquired 17 years ago by Coilhose Pneumatics. What hasn't changed is how easy Freelin-Wade makes sourcing plastic tubing and hose.

Many of our more popular items can be found in the Coilhose Pneumatics' catalog along with their wide range of pneumatic accessories.

Should you require a different tubing solution, no one can match Freelin-Wade's quality, customer support, limitless product variations and rapid deliveries...all available with no minimum order requirement.

All of this is why we say we are "Well Connected." Find out for yourself how easy it is to do business with Freelin-Wade. Call us today: 888-373-9233 or visit us online at [www.freelin-wade.com](http://www.freelin-wade.com)

A COILHOSE COMPANY

# WANT IT?

We'll make it for you

## Speedy

We're fast. In fact, we've set the bar for the industry on rapid delivery.

How fast? Well, you might think that it's enough to talk about our pledge to ship any of our nearly 2,000 stocked items within 24 hours. In fact, many will ship the same day that you call us... but that's just the start.

Our rule of thumb is to turn around coil variations in as little as one week. The same with cut lengths, custom packaging and printing. Bonding of our catalog tubing usually takes two weeks and we can do a custom extrusion in under three weeks.

No one wants to wait around for their order. Certainly not you and neither do we. We've got orders to fill.

## VARIATIONS

### Coiling

A coil is an excellent way to keep your workstations organized and safe while maximizing working length. We offer several standard coils in our catalog but it's easy for us to make a variation. Just pick a tube from the catalog and have us coil it.

### Bonding

Freelin-Wade has developed a special bonding process that can combine two or more tubes of any size and color. Just pick your tubing from our catalog and have us bond them. It will make your work area more organized and simplify the task of line tracing. Bonding also makes your lines look more professional and user-friendly.

### Colors

In addition to our 28 stock colors, it's easy for us to match virtually any color you can dream up. We extrude a rainbow of personalized colors for our customers every day. Pick your color from the Pantone® color library or just send us a swatch of what you want us to match. It's simple, and we're the fastest in the industry at turning color variations around.

### Printing

Freelin-Wade can print your custom specs on any order over 5,000 feet for free, or a nominal charge for smaller orders. The print is usually text, but we also have graphics capabilities if you would like your logo printed.

### Cutting

We have the right equipment and are set up to precisely cut our tubing in an efficient and cost-effective manner. If you want your tubing cut into specific lengths, you can save time, money and reduce waste by having Freelin-Wade cut the tubing for you.
