

APPLICATION BENEFITS

- High precision with straightness and flatness within 0.0002 inches per inch
- Superior rigidity with high moment loads
- Lowest deflection rate of any Tol-O-Matic actuator
- Excellent repeatability
- Wide stable platform for XY applications

GUIDANCE SYSTEM

- Ground linear profiled rails and ball bearing blocks decrease deflection and provide smooth carrier/load movement

STANDARD MOUNTING

- Mounting holes are spaced the length of the actuator for ease in mounting directly to a flat surface.

ACTUATOR/MOTOR FACTORS

- Actuator's operating temperature range (40-130° F, 4-54° C) should take into consideration heat generated by the motor and drive, linear velocity and work cycle time.
- For large frame motors or small actuators, cantilevered motors need to be supported, if subjected to continuous rapid reversing duty and/or under dynamic conditions.

AVAILABLE OPTIONS

Mounting Plates: provide clearance height for motors and motor mounts when mounting on a flush surface. Recommended on all TruTrack actuators, they prevent actuator body deflections over 0.015 in (3.8mm).

Auxiliary Carrier: Increases rigidity, load-carrying capacity and bending moments

Double C-face Brake: a power-off holding brake with an output shaft.

Double C-Face brakes are used for static holding (back driving prevention) and are not designed for dynamic stopping. If your application requires stopping, please contact Tol-O-Matic.

Bellows: protects from dust and dirt environments.

Motor Mounting and Gearhead Reduction:

In-line Motor Mounting— motor is internally coupled to the actuator shaft.

Reverse-parallel Motor Mounting—These factory assembled configurations allow offset mounting of the motor to either side of, or below the actuator. Available in 1:1 or 2:1 drive ratios, they offer quiet, zero-backlash coupling of the motor to the actuator screw shaft.

Gearhead Reduction—Gearheads are available for applications requiring reduction for inertia matching or higher torque at lower speeds. High efficiency, single stage, true planetary gearheads are available in 5.5:1 and 10:1 ratios for reduction solutions with most Tol-O-Matic NEMA 23- and 34-frame motors. For gearhead specifications and dimensions, see page F-10.

Switches: Available in ac reed or dc Hall-effect. (Triac switches are not available on TruTrack actuators) See section I.

RODLESS

TKS Series

- General actuator specifications
- Friction force
- Lubrication
- Mounting recommendations

¹ Listed values are intended for reference purposes only, and not as an engineering standard of absolute tolerance for a given actuator. Values were derived from testing of characteristic samples of appropriate products, and indicate an expected range of deviation from a theoretical straight line in the indicated plane of carrier motion. Appropriate installation is the single most important factor in reducing such deviation, so good engineering practices such as measurement, mapping, etc. must be employed in applications with stringent straightness/flatness requirements. For more information on how these values were obtained, please read the white paper on this subject available at www.tolomatic.com.

² Actuator mounted on a flat surface and fully restrained. (See dimensional drawings on pages C-58, C-64, C-70 and C-76)

³ Ball screw; not including backlash

⁴ Heat generated by the motor and drive should be taken into consideration as well as linear velocity and work cycle time. For applications that require operation outside of the recommended temperature range, contact the factory.

LARGE FRAME MOTORS AND SMALLER SIZE ACTUATORS: Cantilevered motors need to be supported, if subjected to continuous rapid reversing duty and/or under dynamic conditions.

FRICITION FORCE

$$lbf = 0.0003 \times \text{LOAD (lb)} + 3.96$$

$$N = 0.003 \times \text{LOAD (kg)} + 17.6$$

LUBRICATION

Proper and adequate lubrication is essential for normal operation of TruTrack actuators. Poor lubrication will cause quicker wear and decrease service life of the actuator. For general use, lubrication should be performed at intervals of 4,000,000 linear inches of travel (100 km) or once every year, whichever occurs first. However, the operating conditions of certain applications may require more frequent lubrication. Please consult Tol-O-Matic for recommendations.

Recommended greases:

- Multi-purpose grease based on refined mineral oil containing lithium thickening agent (excellent at high pressures, excellent viscosity stability).
- Grease based on a high-grade synthetic oil containing a urea thickening agent (long life, wide temperature range).

Minimum Dimension 'D'	(in : mm)	5.63	6.93	7.63	7.75	142.9	176.0	193.8	196.9	

* Bending moments are based on 200,000 (5,000 KM) linear inches of carrier travel.

Breakaway torque will increase when using the Auxiliary carrier option. When ordering, determine your working stroke and enter this value into the configuration string. Overall actuator length will automatically be calculated.

Deflection Considerations: In applications where substantial Mx or My moments come into play, deflection of the cylinder tube, carrier and supports must be considered. The deflection factors shown in the Load Deflection charts, are based on cylinder mounted with tube supports at minimum recommended spacing. If more rigidity is desired, refer to the Auxiliary or Dual Carrier options.

** Loads shown in table are at minimum "D" dimension, for ratings with longer "D" dimension see graph on page C-57.

SN = Solid Nut

* *Maximum thrust is the maximum continuous dynamic thrust subject to Thrust x Velocity limitation.*

PV LIMITS: Any material which carries a sliding load is limited by heat buildup. The factors that affect heat generation rate in an application are the pressure on the nut in pounds per square inch and the surface velocity in feet per minute. The product of these factors provides a measure of the severity of an application.

$$P = \frac{\text{Thrust}}{\text{Max. Thrust Rating}} \times V = \frac{\text{Speed}}{\text{Max. Speed Rating}} \leq 0.1$$

Customization, Tol-O-Matic does it every day

Tol-O-Matic's ability to provide creative and imaginative solutions for our customers has made us a world leader in the manufacture of automation components. Every Tol-O-Matic product is custom made specifically to your order. Our product line contains over 30,000 base models, most of these manufactured in customer specified strokes. Add on our wide variety of available options and Tol-O-Matic offers literally millions of choices to fit your application. Even with so many choices we encourage you to contact us with your "specials" requirements. We have the resources to create whatever it is you may need.

Exacting precision for a 5-axis milling machine.

Tol-O-Matic worked with this manufacturer to create a prototype specific to their application. Standard RSA rod screw actuators were completely modified with special bearings and precision-matched lead screws to provide the highest possible accuracy, rigidity and ultra low-backlash. A series of six Axidyne DV drives worked with their existing controls and proprietary software system to cue the six legs of actuator motion.

An actuator for an extremely corrosive environment

This standard B3S actuator has a nickel-plated extrusion, other components were made of stainless-steel. A special mounting bracket was created to use with a nonstandard motor.

YES, we can create it.

Tol-O-Matic has created hundreds of special proprietary products for a wide variety of different industries. From simple refinements like creating new mounting brackets or tapped holes to redesigning an existing product, or creating a completely new product, Tol-O-Matic has the resources available to design, test and manufacture whatever you need. Our engineers are available to visit your facility and discuss your special requirements.
